

IQ LIFT PRO 7 ACTIVE

IQ LIFT PRO 7 ACTIVE is a human powered mast lift.

This means it does not require any electrical components and is powered through manually raising and lowering the platform.

IQ LIFT PRO 7 ACTIVE manual platform is designed and engineered to provide maintenance operators with a safer alternative to ladders. A mechanism with a gas spring and a mechanical reducer allows the operator to lift the machine with the minimum effort through a handcrank. IQ LIFT PRO 7 ACTIVE is manually elevated by the operator and does not need batteries or charge systems to work. IQ LIFT PRO 7 ACTIVE is to be used exclusively indoors, away from wind loading and on flat flooring. It can be used in hospitals, food production plants, pharmaceutical plants, industrial plants for maintenance purposes, construction sites, and for shopfitting. This machine can be used for other applications if the operating parameters indicated in our user manual are adhered to.

The IQ LIFT PRO 7 ACTIVE can reach a maximum platform height of 2.10m and can be raised and lowered in 18/20 seconds. Auto brake will activate when the machine has the travel lock engaged and has been raised slightly, this ensures the machine won't move whilst being transported to site. The platform has a built toe-board and has a safety device located on the side of the machine which can be used to lower the basket in case of emergency.

MAX WORKING HEIGHT 4.10M

STOWED HEIGHT 1.68M

GROSS WEIGHT 274KG
